- Review IP multicasting applications and what makes multicast unique
- Understand IP multicast at the access layer, from layered encapsulation to switching multicast frames
- Work with Layer 2 switching domains, IPv4 group addresses, and MAC address maps
- Utilize Layer 3 multicast hosts and understand each PIM mode
- Implement basic forwarding trees and rendezvous points
- Compare multicast forwarding modes: ASM, SSM, and PIM Bidir
- Plan and properly scope basic multicast networks
- Choose your best approach to forwarding replication
- Apply best practices for security and resiliency
