The Assimilation of Biology, Logic, and Set Theory Edward Hulburt PhD

The Assimilation of Biology, Logic and Set Theory presents four principles of adaptation wherein two entities occur under the same condition, or one entity occurs under two conditions, or one entity is adapted to a second, or two or more entities are adapted to two or more conditions.

These principles emerge from a wealth of empirical data, which are summarized by logically valid formulas. This account continues and presents the elements of set theory and how biological data, ensconced in logical formulas, can be integrated in sets.

This is a book of the 21st century, showing how biological data can be brought together and enhanced by logical and set theory formulation of the data. It is a primer on how to apply logic and set theory. At the same time it is interdisciplinary and so it is transformative. *The Assimilation of Biology, Logic and Set Theory* is a milestone to the future.
