Multiple Comparisons and Multiple Tests Using the SAS System

Peter Westfall

Multiple Comparisons and Multiple Tests Using the SAS System Peter Westfall

Have you ever felt that there was no multiple inference method that fits the particular constraints of your data? Or been overwhelmed by the many choices of procedures? *Multiple Comparisons and Multiple Tests Using SAS*, written by Peter Westfall, Randall Tobias, Dror Rom, Russell Wolfinger, and Yosef Hochberg, solves both dilemmas for you by providing cutting-edge methods, specialized macros, and proven "best bet" procedures. The specialized macros and dozens of real-world examples illustrate solutions for a broad variety of problems that call for multiple inferences. The book also discusses the pitfalls and advantages of various methods, thereby helping you decide which is the most appropriate for your purposes. If you are a researcher or scientist in pharmaceuticals, engineering, government, or medicine, you will find many methods applied to real data and examples from your field. The book includes specialized code and explanations throughout. It discusses in detail pairwise comparisons and comparisons with a control. Additional topics include general linear contrasts; multiple comparisons of multivariate means; and multiple inferences with mixed models, discrete data, and survival analysis. Users with releases of SAS software prior to SAS 7 will need to make some modifications.
